Apache Spark Installation Instructions for Ubuntu

For this tutorial, we are going to use Apache Spark 2.4.0. The only requirement is to have Java 8:

1. Check Java version in the terminal:

   java -version

2. In case we don't have Java installed, install it with:

   sudo apt install openjdk-8-jdk

3. If we have a different version, change the Java version to Java 8:

   sudo update-alternatives --config java

4. If Java 8 is missing, go to step 2.

5. Download Apache Spark from: https://spark.apache.org/downloads.html

6. Choose version 2.4.0

7. Uncompress it (ej. /opt/spark-2.4.0)
